BORDER CONTROL VEHICLE

SEVEN DRAGONS BORDER CONTROL

Facilitates the monitoring of borders activities from both air and land. The different sensors are used to gather information which is relayed to the Command Control. Using the disseminated data, operators are able to make fast decisions based upon the intelligence gathered, in real-time.

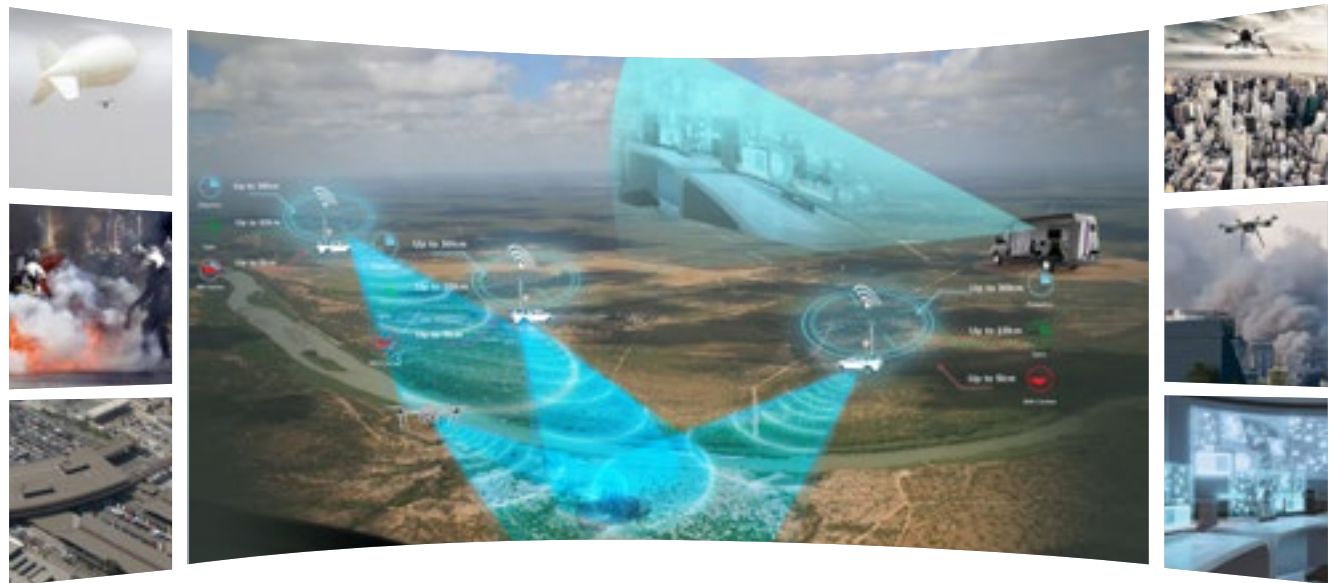

The customizable vehicle includes:

Light-weight radar-improves sub clutter visibility by approximately 30dB. The advanced radar system provides increased detection of small targets, creating an accurate situational awareness picture.

The IMSI Catcher performs "cell spoofing" with wide area coverage to force cell phones to register via a customized cell. The system identifies the unique IMSI and TMSI numbers associated with each phone. The powerful night and day multi-sensor observation system allows long range observation and detection using state of the art thermal imaging and CCD technology.
